CAREER OBJECTIVE

Aspiring front-end developer with knowledge of UI/UX design and currently learning React. I'm eager to improve my teamwork and communication skills while gaining real-world experience. My goal is to become a skilled full stack developer and help build useful, user-friendly digital products. This opportunity is a great chance for me to learn from real experience.

EDUCATION

BSc (Hons) Computing

2023 - Present

- Islington College
- London Metropolitan University
- Kamal Marg, Kamalpokhari, Kathmandu

School Leaving Certificate (SLC)

2021 - 2023

- Bishnu Memorial School
- National Examination Board (NEB)
- Achariya line, Dharan - 9, Sunsari

Secondary Education Examination (SEE)

2021

- Bishnu Memorial School
- National Examination Board (NEB)
- Achariya line, Dharan - 9, Sunsari

SKILLS

Technical skills

- **Programming Languages:** Html, CSS, Python, Java, JavaScript, My SQL, MongoDB
- **Frameworks:** Tailwind CSS, React, Nodejs,
- **Application and Software :** Figma, Photoshop, Git & GitHub, VS Code, Eclipse, MongoDB Compass, Jupyter Notebook, Hive, GitHub, Draw. Io
- **Operating System:** Windows, Linux

Soft Skills

- Researching and gathering information
- Adaptability
- Project management
- Time Management
- Giving and receiving feedback

PROJECTS

Academic Projects

1. Watch Resell Platform

- **Language/Technologies Used:** Java, HTML, CSS, JSP, Servlets, MySQL | MVC Architecture
- **Description:** Developed a dynamic e-commerce website for watch reselling with secure login, encryption, session management, and role-based access for users and admins. Built using Java, JSP, and Servlets following the MVC architecture. Implemented full CRUD operations for products, carts, orders, and user profiles.
- **Tools & Libraries:** Eclipse IDE, XAMPP, JSTL, MySQL Connector, Figma

2. Urban Complaint Analytics using NYC 311 Data

- **Language/Technologies Used:** Python
- **Description:** Analyzed a large-scale NYC 311 Service Requests dataset to extract insights on citizen complaints using data cleaning, preparation, and exploratory analysis techniques. Processed over 300,000 records by converting date formats, handling missing data, dropping irrelevant columns, and creating new time-based metrics. Conducted correlation analysis, visualized complaint patterns across cities.
- **Tools & Libraries:** Jupyter Notebook, , Pandas, NumPy, Matplotlib, Seaborn

3. Land Rental System

- **Language/Technologies Used:** Python, Text File Handling
- **Description:** Built a console-based land rental system in Python that allows users to rent and return land plots. The system calculates rental charges, applies fines for late returns, and generates billing details in both the console and .txt files. Used basic Python features like functions, dictionaries, and loops.
- **Tools & Libraries:** IDLE, Draw.io

Personal Projects

1. Inventory Management System UI

- **Tools Used:** Figma (UI/UX design)
- **Description:** Designed a dashboard-style app to help users easily track inventory—monitoring stock levels, managing items and suppliers, processing orders, and visualizing analytics. The prototype includes a home/dashboard view, item listings, analytics panels, and user-friendly navigation components.

2. Academic Staff Management System

- **Language/Technologies Used:** Java, Swing
- **Description:** Desktop application that lets users add Lecturer and Tutor records, grade student assignments (by lecturer ID, department & years' experience), calculate and update Tutor salary (performance index, hours, prior salary), remove Tutor entries, display stored details, clear fields, and show validation/error dialogues for invalid input.
- **Tools & Libraries:** BlueJ IDE, Draw. Io

3. *Real-Time Weather Forecast Application*

- **Language/Technologies Used:** *HTML, CSS, JavaScript*
- **Description:** A real-time weather forecast web application that fetches and displays weather data based on user input (city or location). The application uses the OpenWeatherMap API to retrieve live weather conditions such as temperature, humidity, wind speed, and weather description. JavaScript is used for API integration, dynamic DOM updates.
- **Tools & Libraries:** *Vs code, OpenWeatherMap*
